

“With resin and carbon fiber, we can build a New Economy.”

New technologies are powering the drive to develop renewable energy. Spacecraft that are commercially viable. Airliners that leave a smaller carbon footprint. And cars that can cruise all day long without burning a drop of gasoline.

From syntactic foams and other lightweight structural composites to the new generation of adhesives and batteries, **Ross** mixers are helping to create the materials necessary to build the **New Economy**.

We'd like to help you succeed, too.
